

Your windows and French windows have been equipped with the high-quality ROTO ALU hardware system. The following maintenance work and checks are necessary in order to ensure that your fitting continues to operate faultlessly for a long time.

Remove all splashes of lime, cement and mortar on the fittings in order to prevent malfunctions due to the fittings blocking.

Oil or grease all moving parts and all locking points once per year.

Only use acid-free oil or grease.

Adjust the sash pressure. The contact pressure is adjusted ( $\pm 1$  mm) by turning the cams.

Check that the fixing and clamp screws are securely fixed.

If necessary, check that the sash smoothly runs into the frame when closing, lift sash by using the adjustment facilities.
